

ECOBOOST INFO SHEET

Product Details

Sachet/bag size: 3" x 5" x 1" (one sachet per package)

Ingredients: 50g high-purity mineral beads, interior nylon sachet, exterior polyester sachet

Packaging

Compact packaging to reduce carbon footprint and shipping costs

Net weight: 58 G (2 OZ)

ECOBOOST is the **world's first 100% natural laundry booster that uses 99.99% pure mineral-based technology**. It reduces laundry detergent by 50% and saves consumers up to \$50 a year on laundry detergent. It enhances cleaning, odor reduction and has a potent antibacterial effect on laundry that's more effective than any leading detergent. High value features include:

- Zero Chemicals
- Reusable for 1 year (up to 350 washes)
- Costs only pennies per use
- Hypoallergenic
- Baby and eco-friendly
- Boosts cleaning by 40%
- Antibacterial & Antiviral
- No Dyes or Fragrance
- Clinical grade, all-natural, mineral technology
- 100% biodegradable mineral
- Eliminates plastic bottle waste
- 5X better odor removal versus only detergent

INSTRUCTION FOR USE

1. Simply place cleaning bag in washing machine—reduce laundry detergent by 50%.
2. After washing, leave in machine with door open to dry or remove to air dry.
3. ECOBOOST is for regular washing. For heavy stains, please use a spot remover.

Where is the product made? It is made in Canada with imported ingredients.

How does ECOBOOST work? The high-purity mineral in the bag reacts in the water in three ways.

1. The mineral pellets release thousands of molecular hydrogen nano-bubbles which are so small they force their way through fabric, pushing out dirt, sebum, germs, bacteria, virus and odour into the water to be rinsed away.
2. The pH level is increased creating ionized alkaline water which enhances the cleaning process.
3. Magnesium hydroxide is released which is a natural cleaning agent and highly effective antiviral and antibacterial.

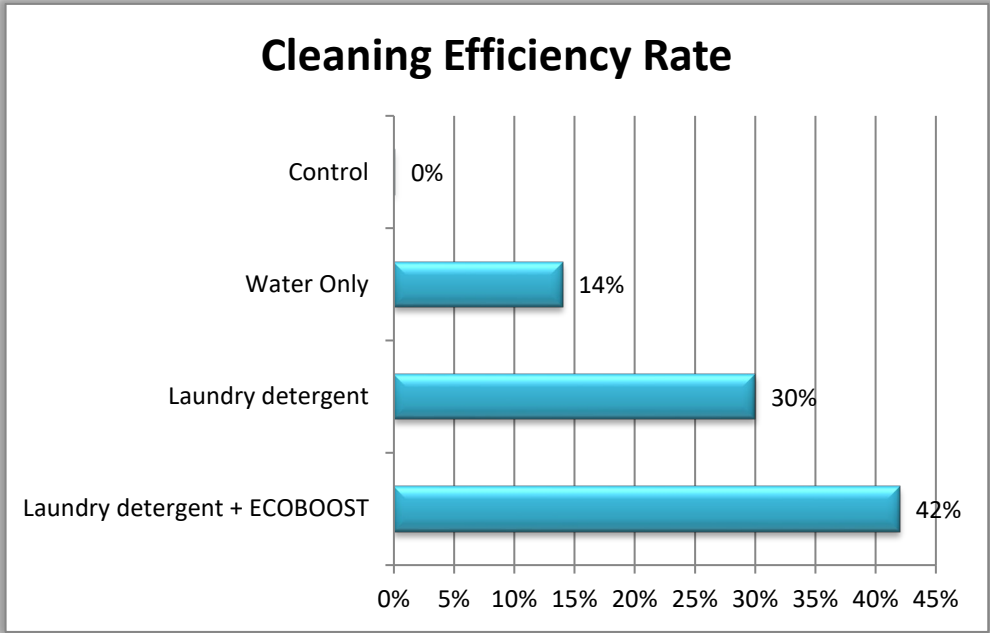

How long does ECOBOOST last? It will last 350 washes which is about 1 year of average household use for an individual person and about 6 months for a family of 4. After that time the mineral will be reduced in size and potency so we recommend purchasing a new ECOBOOST to maintain cleaning effectiveness. After its lifecycle, cut the bag open and place the mineral pellets in the soil near a plant or tree to enrich the soil naturally.

What type of washing machine will ECOBOOST work in? Top load, front load, HE, in cold, warm or hot water up to 17 lbs. or 8 kg. For larger or industrial-sized laundry machines, please use multiple bags.

Does ECOBOOST clean stains (e.g. red wine, blood, etc.)? It is designed for traditional cleaning just like detergents. For tough stains, we recommend using a spot remover prior to washing.

Clinical Lab Testing

40% better cleaning over standalone detergent

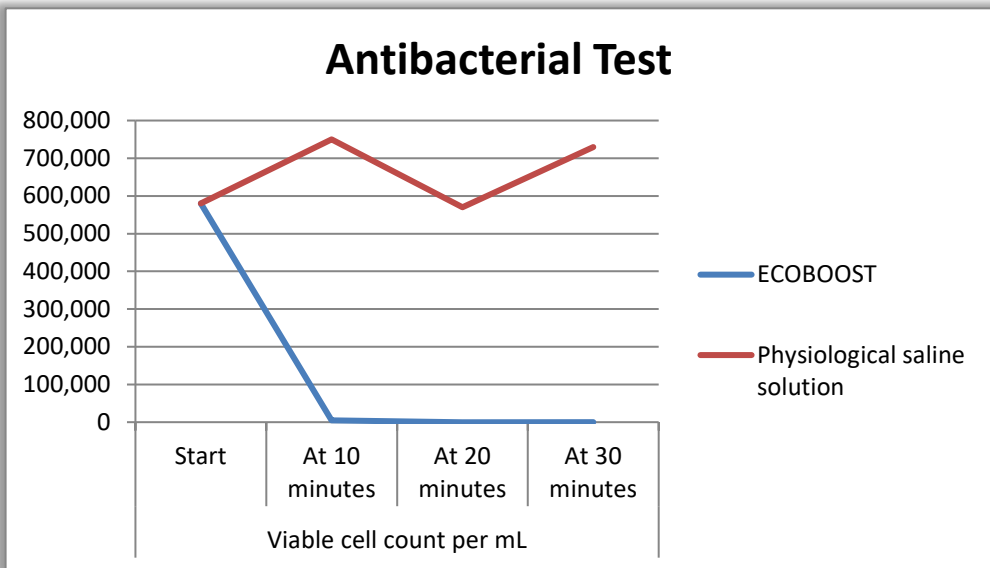

Conclusions

It was determined that when ECOBOOST and 50% laundry detergent were used together, a **40% enhancement of the cleaning efficiency rate**, in terms of the ability to decompose sebum (triolein), was noted over standalone laundry detergent.

.....

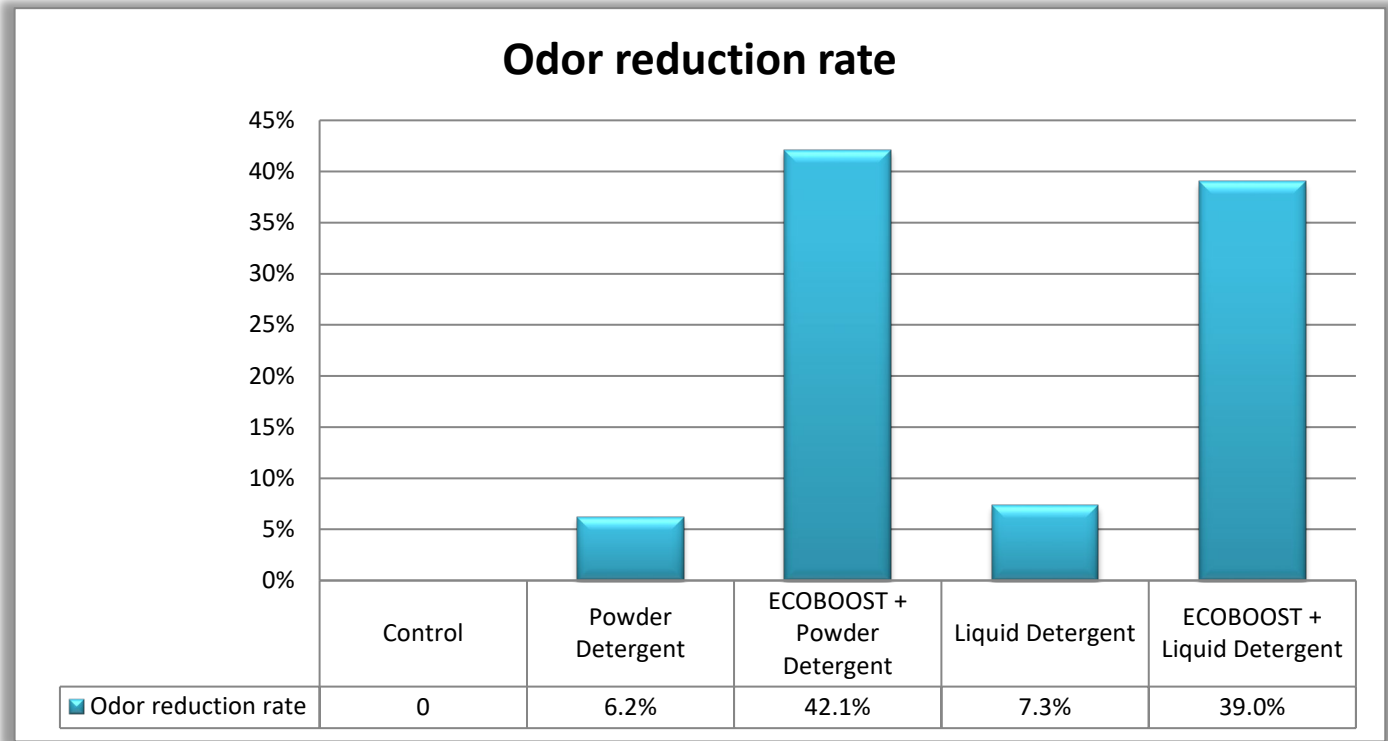

Reduces E. coli bacteria to near zero after 30 minutes

Conclusions

The test results showed ECOBOOST has strong inhibitory effect after 10 minutes. Almost no E. coli bacteria were detected after 30 minutes. This reveals that **ECOBOOST has powerful antibacterial effect** on each laundry load under regular washing cycle times.

Superior odor removal 5X to 7X better than just laundry detergent

Conclusions

The test results reveal that the when **ECOBOOST** was used in combination with detergents, it showed a considerably enhanced efficiency in odor component decomposition (5X to 7X), much more than standalone detergents.

ECOBOOST
Worlds First 100% Natural Laundry Booster!

- Reusable for 1 year – only pennies per use
- Boost cleaning by 40%
- Zero dyes, fragrances or toxic chemicals
- Antibacterial & Hypoallergenic
- Reduce laundry detergent by half
- 5X better odor removal
